[Elsevier]**

Semarang - Central Java, Indonesia
September 16-17, 2014

The food technology is growing rapidly over a decade to fulfil the human's need. The progress of technology in food industry is also changed very fast to overcome the need and to win the food business competition resulting in the two big problems: over consumption and over exploitation.

In order to maintain the stability of food demand and the rapid-changes on food technology, the contribution of food and agro-biodiversity technology and management may able to overcome such problems. Since every nations are also facing similar problems therefore this international symposium be conducted

The symposium will be a two day program with invited speakers, oral presentations and a poster session. This symposium will address the many factors involved in the technology and management on biodiversity of food and agro-industries.
